Test Tables	@TEST_TABLE

Update a set of variables from a Test Table matrix.

Keyword:

@TEST_TABLE

Usage:

Specify an index value to be used to extract a set of values from a Test Table file. Update the variables specified in the table file with the values from this index into the table.

Data Fields:

success_path	The gp_test path to execute upon successful completion of the variable updates. Options are NONE, MODE_TERMINATE, RETURN.
failure_path	The gp_test path to execute upon failure to complete the variable updates. Options are NONE, MODE_TERMINATE, RETURN.
pathname	The name of a Test Table file. This field may be a file pathname, a string variable lable which contains the pathname, or a computed expression which resolves to a valid pathname.
index_variable	This is the label of an integer variable which is used to determine which record is read from the Test Table file

Example Specification:

```
@TEST_TABLE
 #success_path          failure_path
 MODE_TERMINATE         99

 #pathname              index_variable
 /specs/gp/vrbl_x       count
```

Other Examples:

```
@TEST_TABLE
 #success_path          failure_path
 MODE_TERMINATE         RETURN

 #pathname              index_variable
 Furball_1              count

@TEST_TABLE
 #success_path          failure_path
 RETURN                 99

 #pathname                        index_variable
 " '/specs/tt/' + filenumber "    count
```
